Study Tour: Dongguan F.2 STEM Tour

26 – 27 March 2018

Almost 150 F.2 students have participated in a study tour to Dongguan as a part of the STEM curriculum. We first visited the Dongjiang-Shenzhen Water Supply System and understand how this project benefits Hong Kong and how the engineers overcame technical obstacles. Then we visited the Lung Cheung Group and Songshan Lake Science and Technology Industry Park Community. From these visits we understand how a traditional light industry transformed into an education pioneer in STEM education. In day 2, we visited the Nanshe Ming and Qing Ancient Village to witness the balance between development and heritage conservation. This trip has provided insights to the connection between STEM education and its applications in our society.
